

Your home has been fitted with a Zehnder Greenwood Unity CV2GIP fan.

zehnder

That's me!

I provide ventilation for your home, protecting it against condensation and mould growth and ensuring a good level of indoor air quality.

I am essential because everyday activities such as bathing, cooking, and showering create excessive steam and smells in the air which needs to be removed. Without me, the steam and smells will not be eliminated!

Please don't switch me off...

I'm a **continuous running extract fan** and I have been fitted in your bathroom and/or kitchen. I am smart, energy efficient and designed to be discreet as possible, you will hardly notice I'm there!

I run at a very low rate and ensure you have just the right amount of ventilation and clean air to maintain a really comfy home, without losing unnecessary heat keeping you warm! As well as all that, I'm really quiet... just because I run all the time it doesn't mean I'll be a nuisance – not even at night-time!

**Best of all – I do all of this automatically...
Without any help from you.**

If I'm in your kitchen, I **may** have been fitted with an extra boost facility, meaning you can reach a higher rate of extract ventilation if you need to! Usually you would boost me via a switch and when you turn the switch off, I'll go back to running at my low running speed!

I've been designed for long life and will provide you with many years of trouble free operation.

Remember, I run at a very low level all of the time, I *do not* and *should not* turn off.

***I cost just under
3 pence per week to run!***

***That's equivalent to running the
fan for the whole year at the same
cost as 2 tins of baked beans!***

(Total cost of 2 tins £1.50)
